

Y3 COMPUTING – 5 PRESENTATIONS

QUESTION: HOW DOES AN ON-SCREEN PRESENTATION HELP SOMEONE GIVE A TALK?

Creating Media

Design & Development

Effective Use of Tools

Impact of Technology

WEEKS OF TEACHING	LINE OF ENQUIRY	THRESHOLD CONCEPT	SUBSTANTIVE KNOWLEDGE	DISCIPLINARY KNOWLEDGE	CURRICULUM ENDPOINT
1	Introduction to PowerPoint	Communicate	- PowerPoint is a computer program that helps us make a slideshow presentation to show information. - A slide is one page of a slideshow presentation. - Style is the special way that something looks or is formed. - Changing the format means altering how media, such as text or images, looks. - A font is a design of letters, numbers, and symbols. - WordArt formats text with shadows, curves, and 3D effects.	Use some of the advanced features of applications and devices in order to communicate ideas, work or messages professionally.	Select, use and combine a variety of software (including internet services) on a range of digital devices to design and create a range of programs, systems and content that accomplish given goals, including collecting, analysing, evaluating and presenting data and information.
2	Using Design Templates and Adding Media	Communicate	- Media is information in the form of text, sounds, images, or video. - An image is a picture we can see on a screen. - Handles are tiny squares that appear around a selected image – we can use them to change the size or to move the image. [James' note: this definition is clearer for Y3 than the one in the presentation.] - Picture styles are designs we can add to pictures like borders, shadows, or shapes.	Use some of the advanced features of applications and devices in order to communicate ideas, work or messages professionally.	
3	Adding Animations and Transitions	Communicate	- Animation is adding movement to still objects such as text and images. - A transition is how a slide moves from one to the next.	Use some of the advanced features of applications and devices in order to communicate ideas, work or messages professionally.	

<u>4</u>	Creating a Presentation	• Communicate	• Slide notes are words under a slide to help the presenter remember what to say when they present.	• Use some of the advanced features of applications and devices in order to communicate ideas, work or messages professionally.	
<u>5</u>	Presenting	• Communicate	• [This lesson recaps previous substantive knowledge.]	• Use some of the advanced features of applications and devices in order to communicate ideas, work or messages professionally.	

ASSESSMENT OPPORTUNITY:

Can children create a PowerPoint presentation independently, including enhancing it with appropriate effects, and present it to an audience?

Children understand what presentation software is for and can explain how it is used to share information clearly with others. They recognise what makes a presentation effective, including suitable layout, colour, and readable text. Children can insert slides into a presentation, select appropriate layouts, and add a range of content such as text, pictures, and shapes. They can format these elements to improve the look and clarity of their work. They use transitions between slides and animations on objects appropriately, enhancing their presentation without overusing effects. Children understand how notes can support them during delivery and use them to help present confidently. They can create a complete presentation that demonstrates these skills and present it to an audience with understanding and confidence.
